

## Cooling Contingency Planning

TraneOregon can help you create a Cooling Contingency Plan for your building to reduce your risk of financial loss due to the loss of comfort or process chilled water in the event of unexpected equipment failure.

## HAVE YOU EVER CALCULATED WHAT A DAY OR WEEK WITHOUT COOLING WOULD COST YOUR BUSINESS?

### A Cooling Contingency Plan Will:

**Reduce downtime** during an emergency, since a good deal of preliminary work has been completed and the building is already prepared.

**Reduce time** required to obtain installation services (electrical, mechanical, etc) since a good portion of the need for the trades has been handled as part of the building preparation process.

**Reduce start-up delays** caused by oversights or problems resulting from improvised designs.

### A Thorough Analysis:

Trane has developed a comprehensive program that helps facility owners and managers create contingency plans for their cooling systems.

Cooling Contingency Plans are an evaluation of your facility's cooling system to identify potential sources for failure.

We will work with you to create a comprehensive plan for each of these failure scenarios.

The goal is to minimize downtime and reduce the risk of financial loss to your facility due to the loss of comfort or process chilled water.

We take care of all required elements to keep your operations running while damaged equipment is serviced including providing all parts.
